FOREWORD

Agriculture and Fisheries 2010 provides users of official statistics with an overview of how the agriculture and fisheries sectors have fared in the reference year. The publication is being compiled and released for the tenth year running. The 2010 edition encompasses 11 chapters highlighting the most important aspects of the Agriculture and Fisheries sectors. The data in each chapter are supplemented by a concise commentary on the main findings. Furthermore, data in this publication are supported by the Census of Agriculture carried out in 2010.

The number of agricultural holdings across Malta and Gozo in 2010 amounted to 12,529, covering 11,453 hectares of utilised agricultural area. The majority comprise relatively small holdings, with 73.5 per cent of agricultural holdings having a utilised agricultural area of less than 1.0 hectare each. While full-time employment is declining, an upward move was observed in respect of part-timers in agriculture.

With regard to livestock, the cattle stock declined when compared to 2009. A similar trend was observed for the sheep and goat population. By contrast, pigs were on the increase. The 2010 Census of Agriculture revealed that 765 agricultural holdings had a combined total of 0.97 million in poultry stock. In terms of output, fresh vegetables increased in volume but declined in value compared to the previous year. The opposite was the case for fresh fruit.

In 2010, the volume of fresh fish landings advanced by 5.6 per cent. All the major species registered increases, except for blue fin tuna. The wholesale value increased by 12.0 per cent.

The developments described here are solely excerpts derived from the wealth of information compiled and disseminated by the Agricultural and Fisheries Statistics Unit.

I would like to acknowledge the input of Ronald Tanti, Antoine Farrugia, Nadia Fabri, Shirley Cutajar and Gayle Camilleri Scerri in the collection and analysis of the data included in this annual publication.

COMMENTARY

INTRODUCTION

The Agriculture and Fisheries 2010 encompasses 11 chapters highlighting the most important aspects of the Agriculture and Fisheries sectors. Each chapter is outlined below with background information on the different themes, followed by a brief definition of the variables collected, the data availability and a brief commentary on the main findings. The main focus of each chapter is a set of tables and graphs that have been chosen to show the wide range of data available for a particular theme, providing users with information showing specific trends within the sectors.

The CD version is accompanied by a PDF version that is available on the NSO website (www.nso.gov.mt)

CHAPTER 1 - AGRICULTURAL HOLDINGS AND LAND

This chapter focuses on the Utilised Agricultural Area (UAA) and the total number of agricultural holdings in Malta and Gozo. An *agricultural holding* or *holding* is defined as a single unit, both technically and economically, which has a single management and which undertakes agricultural activities listed in Annex I of Regulation (EC) No 1166/2008 of the European Parliament and of the Council of 19 November 2008 on farm structure surveys and the survey on agricultural production methods (repealing Council Regulation (EEC) No 571/88). Data was collected biennially from 2003 to 2007 through the survey on the structure of agricultural holdings. The Census of Agriculture was undertaken in 2010.

The number of holdings in 2010 amounted to 12,529 (Table 1.1) with a total of 11,453 hectares of Utilised Agricultural Area (Table 1.2). The majority of agricultural holdings in Malta and Gozo are relatively small, with 73.5 per cent of the agricultural holdings having a UAA less than 1.0 hectare each (Table 1.1) Medium-sized agricultural holdings made up 24.4 per cent of the total; such holdings comprise between one and five hectares, while 2.1 per cent are considered large, each having a minimum of five hectares of UAA. The distribution of the UAA can be seen in Table 1.8. The cultivation of forage crops, covering 5,553 hectares or 48.5 per cent, is predominant. A total of 1,123 hectares are used for kitchen gardens. This reflects the high number of small agricultural holders. Area under vines in 2010 (Table 1.9) declined by 137 hectares from 2007. However it has to be noted that the decline was registered in the local variety vines (-251 hectares) and table vines (-57 hectares) while the international varieties increased by 171 hectares.

CHAPTER 2 - EMPLOYMENT IN AGRICULTURE

Employment refers to all those people actively engaged in agricultural production. This information was also collected biennially through the farm structure survey from 2003 to 2007. The 2010 employment data is available through the 2010 Census of Agriculture. Tables showing employment by sex, status of employment and work time have been compiled.

In 2010, 18,539 persons were actively engaged in agricultural activity (Table 2.1), up by 8.1 per cent when compared to the 2007 survey. Full-time employment during 2010 declined by 26.2 per cent over 2007 while part-time employment increased by 12.1 per cent (Table 2.2). Employment in agriculture is dominated by the male gender. Female full-time employment represent 8.5 per cent of the total. On the other hand, female participation in part-time activity amounted to 22.2 per cent of all part-time employment.

Table 2.5 reveals the structure of employment by Annual Work Units (AWUs). The majority of persons employed in agriculture, 68.3 per cent, work less than 25 per cent of 1 AWU. On the other hand, 1,301 farmers worked 1 AWU, these being engaged full-time in the sector.

CHAPTER 3 – THE PIG INDUSTRY

Regulation (EC) No 1165/2008 of the European Parliament requires all Member States to undertake an annual Pig Census. Malta has been compiling these statistics on an annual basis since 2000. Pig data for 2010 was collected through the Census of Agriculture. In 2010, 70,583 pigs on 131 farms were registered. Table 3.6 shows that the pig population increased by 7.1 per cent over 2009. Young pigs and fattening pigs increased by 3.8 and 15.5 per cent respectively, over the comparative period in 2009, while breeding stock declined by 5.2 per cent over 2009 (Table 3.6). Tables 3.7 and 3.8 reveal data on slaughtering, compiled from data supplied by the Wholesale Markets and Fishing Fleet Facilities Directorate. The number of pigs slaughtered in 2010 (Table 3.7) went down by 5.4 per cent to 85,228 pigs. The carcass weight of pigs slaughtered edged up by 1.9 per cent to 7,511 tonnes in 2010, as shown in Table 3.8.

CHAPTER 4 - THE CATTLE INDUSTRY

Information on cattle stocks has been entirely compiled with data from the Bovine Register, which is maintained and controlled by the Wholesale Markets and Fishing Fleet Facilities Directorate. Information is collected in line with Regulation (EC) No 1165/2008 of the European Parliament.

The cattle stock as at 1 December 2010 amounted to 14,954 heads on 341 farms (Table 4.1), a decline of 8.1 per cent over 2009. When compared to a year earlier, bovines between 1 and 2 years old and those over 2 years both registered a drop of 12.2 per cent. Cattle aged less than 1 registered the only increase of 3.9 per cent over 2009 (Table 4.6).

Dairy cows, which represented 42.5 per cent of all cattle in 2010 (Table 4.2), declined by 8.2 per cent to 6,362 in 2010. During 2010, the number of cattle slaughtered decreased by 5.9 per cent to 5,691 heads (Table 4.7). This resulted in a 7.8 per cent decrease in the carcass weight, to 1,422 tonnes (Table 4.8).

CHAPTER 5 - SHEEP AND GOATS

The annual stocks of all sheep and goats have been monitored since 2003 and have been compliant with Regulation (EC) No 1165/2008 of the European Parliament of 19 November 2008. The Agricultural and Fisheries Unit bases its statistics on the data obtained from the list provided by the Wholesale Markets and Fishing Fleet Facilities Directorate. Whether for own consumption or for commercial purposes, sheep and goats in Malta are primarily reared for their milk. The sheep and goats industry is mainly a backyard industry and their offspring are not slaughtered at slaughterhouses since they are mainly destined for own consumption. The milk is mainly used to produce traditional cheeselets (*gbejniet*).

The total sheep population in the Maltese Islands registered in December amounted to 12,379 (Table 5.1). This resulted in a 4.0 per cent decrease over 2009. Table 5.6 shows that ewes and ewe lambs and rams decreased by 5.8 and 28.7 per cent respectively. On the other hand, the stock of lambs advanced by 32.9 per cent over 2009. Ewes and ewe lambs made up 85.9 per cent of all sheep, down by 1.7 per cent from 2009. The herd structure of sheep (Table 5.4) shows that 29.8 per cent belong to herd sizes ranging from 1-9 sheep, followed closely by the herd sizes of 20-49 sheep by 28.2 per cent. Herds with over 100 sheep made up 6.3 per cent of the total stock.

The total goat population (Table 5.1) in the Maltese Islands amounted to 5,110, a decline of 14.6 per cent over 2009. Male goats registered a drop of 26.1 per cent while kids increased by 29.2 per cent (Table 5.7). The goats' smallest herd size made up 42.2 per cent while goats' herds with more than 100 goats made up only 5.0 per cent of all goats (Table 5.5).

CHAPTER 6 - POULTRY

As revealed in the 2010 census of agriculture, 765 agricultural holdings had a combined total of 0.97 million poultry. The majority of these agricultural holdings (63.3 per cent) only had 0.4 per cent of the total poultry stock. These holdings were either very small or are engaged in another agricultural activity. On the other hand, 121 agricultural holdings had a total of 0.96 million heads or 99.0 per cent of the total poultry stock. These holdings had, on average, 8,000 heads.

A total of 666,143 broilers were recorded in the 2010 census (Table 6.2), of which 468,493 (70.9 per cent) were on holdings with 10,000 broilers or more (Table 6.3). The distribution of laying hens followed a similar pattern. 300,667 laying hens were recorded in the census where 69.0 per cent of all laying hens were found on agricultural holdings with 10,000 laying hens or more.

Data on the slaughtering of broilers are obtained monthly from licensed slaughterhouses. In 2010, 2.6 million broilers (Table 6.5) were slaughtered, down by 5.7 per cent over 2009. As a result, the carcass weight decreased by 6.1 per cent (Table 6.6).

CHAPTER 7 - OUTPUT OF THE AGRICULTURAL INDUSTRY

In 2010, 41,240 tonnes of fresh vegetables yielding a wholesale value of €17.1 million passed through organised markets (Table 7.1). This resulted in an increase of 3.6 per cent in volume and a decline of 3.9 per cent in the wholesale value when compared to 2009. While the volume of fresh fruit went down to 2,634 tonnes, the wholesale value edged up by 0.7 per cent in comparison to 2009.

The estimated total fruit and vegetable production are shown in Tables 7.12 to 7.16. When taking into consideration direct sales, own consumption and sales to processors, the estimated production of fresh vegetables amounted to 71,442 tonnes, up by 2.5 per cent on 2009. This mainly resulted from an increase in the production of carrots (+28.7 per cent), tomatoes (+26.0 per cent) and cauliflowers (+15.3 per cent). On the other hand, decreases of 29.8 and 23.2 per cent were registered for potatoes and sugar melons respectively. The estimated producer value of fresh vegetables went down by 6.4 per cent to €32.2 million in 2010. On the other hand, the estimated fruit production (Table 7.12) dropped by 6.9 per to 9,187 tonnes in 2010 (Table 7.12). Decreases of 45.9, 39.3 and 6.8 per cent were registered in the production of nectarines, peaches and grapes respectively. Similarly, the producer value of fresh fruit (Table 5.16) edged down by 0.1 per cent to stand at €7.7 million.

Animal production (Table 7.17) decreased by 2.0 per cent to 13,331 tonnes mainly on account of a decline in the number of slaughtered bovines and broilers (Tables 4.7 and 6.5). Consequently, the producer value of slaughtered livestock declined by 1.3 per cent, to €24.7 million, as shown in Table 7.19.

The total estimated milk production (Table 7.23) in 2010 amounted to 45.8 thousand tonnes, up by 5.8 per cent over 2009. This was the result of an increase of 6.9 per cent in cow's milk production. On the other hand, sheep's and goat's milk production decreased by 4.7 and 14.6 per cent respectively. Egg production (Table 7.24) declined by 26.8 per cent to 82.1 million eggs.

CHAPTER 8 - INDICES

The 'all items' vegetables price index in 2010 (Table 8.1) declined by 11.3 per cent to 108.7 points over 2009. Lower producer prices were recorded for all vegetables except sugar melons and potatoes, which rose by 11.4 per cent and 1.4 per cent respectively.

The 'all items' vegetables volume index (Table 8.4) increased by 3.6 per cent to 102.0 points in 2010. The correlation between the price and volume index can clearly be seen here, where the volume index of sugar melons and potatoes decreased by 29.8 per cent and 7.9 per cent respectively.

The 'all items' fresh fruit price index for 2010 (Table 8.7) stood at 134.8 points, up by 1.2 per cent over 2009. This was the result of higher prices received mainly for cherry plums (+129.2 per cent), early figs (+86.9 per cent) and peaches (+34.9 per cent). In contrast, prices for strawberries, nectarines and lemons fell by 10.5, 6.4 and 5.8 per cent respectively.

The 'all items' fresh fruit volume index for 2010 (Table 8.10) went down by 14.6 per cent over 2009, resulting from a general drop in the supply of fresh fruit. Major decreases were registered in the volume index of cherry plums (-79.1 per cent), grapes (-49.0 per cent) and nectarines (-45.9 per cent). On the other hand, increases in volume index were registered in bambinella (+68.7 per cent) and strawberries (+43.9 per cent).

General price trends for the agriculture industry are monitored through the producer price index (Table 8.13). During 2010, the producer price index fell by 1.9 per cent to 114.2 points. Price reductions were registered for fresh vegetables (-7.8 per cent), potatoes (-4.8 per cent), forage (-2.4 per cent) and animal products (-1.4 per cent). On the other hand, higher producer prices were recorded for fruit and animals, both by 1.2 per cent. The input prices for agriculture (Table 8.15) rose by 3.4 per cent to 124.3 points. This was attributable to higher prices fetched for goods and services currently consumed in agriculture (+3.7 per cent), plant protection products and pesticides (+15.1 per cent), energy and lubricants (+12.8 per cent) and animal feeding stuffs (+2.0 per cent).

CHAPTER 9 - ECONOMIC ACCOUNTS FOR AGRICULTURE

The aim of the Economic Accounts for Agriculture is to analyse the production process and the incomes generated by the agricultural industry. Gross agricultural production at producer prices for 2010 is estimated to have amounted to €128.2 million (-3.2 per cent) as can be seen in Table 9.1. After taking into consideration losses and intra-unit consumption, the final agricultural production at producer prices (Table 9.2) fell by 3.4 per cent to €120.8 million.

The producer value of crop output (Table 9.2), which amounts to 37.5 per cent of final agricultural production, went down by 5.9 per cent, mainly due to a drop in the value of potatoes (-50.8 per cent). On the other hand, the producer value of forage rose by 10.0 per cent on account of higher prices fetched when compared to 2009.

Animal output, which represents 56.2 per cent of final production, went down by 1.8 per cent over 2009. The producer value of slaughtered animals declined by 0.1 per cent mainly due to drops in the value of slaughtered cattle (-8.8 per cent) and poultry (-3.0 per cent). The value of animal products went down by 4.9 per cent over 2009 on account of a decrease in the value of egg and milk production by 13.6 and 1.7 per cent respectively.

Intermediate consumption (Table 9.3) for 2010 amounted to €68.1 million, down by 2.3 per cent over 2009. Animal feed, which represented 47.3 per cent of all intermediate consumption, fell by 5.4 per cent over the comparative period as a result of lower prices fetched for animal feed. The value of expenditure on energy increased in 2010, by 6.2 per cent, on account of rising prices for these products used in the input process.

Subsidies on production (Table 9.4) amounted to €3.4 million in 2010 (-26.7 per cent), whereas subsidies not directly linked with production advanced by 88.3 per cent to €24.8 million. Overall, the total subsidies obtained through farming amounted to €28.2 million in 2010, up by 58.2 per cent when compared to 2009.

In 2010, the factor income of the agricultural industry (Table 9.4) rose by 11.3 per cent to €76.7 million. As a result, dependence of subsidies in factor income went up by 10.9 percentage points (+42.2 per cent), from 25.9 per cent in 2009 to 36.8 per cent in 2010

Domestic sales (Table 9.6) amounted to €112.6 million in 2010, representing 87.8 per cent of gross agricultural production. Farm consumption amounted to €7.4 million in 2010, or 5.7 per cent of the gross production, while exports of agricultural products, mainly potatoes, amounted to 0.4 per cent of the gross production.

CHAPTER 10 - SUPPLY BALANCE SHEETS OF AGRICULTURAL PRODUCTS

Supply balance sheets show the country's supply of a specific agricultural product over a specific period of time. The supply of the agricultural product is made up of the total production of the product added to the total quantity of the imported product and adjusted to any change in stocks that may have occurred during the reference period. The supply balance sheets also provide information on the usage of the specific agricultural product.

A set of the most important supply balance sheets have been published. Supply balance sheets are compiled through various sources. The International Trade and Transport Statistics Unit within the National Statistics Office provides data on commodity flows. Production data for various agricultural commodities are compiled through administrative sources, surveys and expert estimates.

CHAPTER 11 – FISHERIES

The fishing fleet register is updated by the Malta Centre for Fisheries Sciences. Maltstat, the fishing fleet register, has been established in collaboration with the Food and Agriculture Organisation (FAO) of the United Nations.

Information from the updated register on all licensed fishing vessels in Malta is analysed by the Agricultural and Fisheries Statistics Unit. Vessel length, licence, type and port are analysed in Tables 11.1 to 11.5. A total of 2,968 licenced fishing vessels were registered as at the end of 2010. This represented an increase of 1.8 per cent from the 2,915 fishing vessels in 2009. The 5 to less than 10 metre category made up 50.5 per cent of all fishing vessels, with a total of 1,498 vessels (Table 11.1). The amount of multi-purpose vessels was 1,267, amounting to 42.7 per cent of the total fishing fleet register (Table 11.2).

Tables 11.6 to 11.10 show data regarding monthly fish landings, which are obtained from the official fish market. The information in these tables include the weight, wholesale value and price per kilogram of the major species landed. In 2010, the volume of fresh fish landings advanced by 5.6 per cent to 1,303 tonnes. All the major species registered increases, except for blue fin tuna, which dipped by 29.4 per cent over 2009. In 2010 the wholesale value increased by 12.0 per cent (Table 11.7).

Price and volume indices of the main species landed, with 2005 as the base year, are published in Tables 11.11 to 11.16. Both the fresh fish price and volume indices (Tables 11.11 and 11.14) increased by 3.1 and 5.6 per cent over 2009.

Tables 11.17 to 11.19 focus on Aquaculture. The data were collected by means of an exhaustive survey where all the fish farms are obliged to submit annual information on the structures and economic activity of each farm. The data collected from Maltese fish farms are in line with Regulation (EC) No 762/2008 of the European Parliament and of the Council of 9 July 2008, on the submission by Member States of statistics on aquaculture.

Table 11.17 shows that the gross output of the aquaculture industry, including fish farming, amounted to €57.1 million, a fall of 26.2 per cent from €77.4 million in 2009. This was mainly

due to a negative change of 206.2 per cent in stocks of fish. The gross value added of the aquaculture industry in 2010 advanced to €12.2 million from €10.0 million in 2009. Taking fixed capital consumption and exchange rate differences into consideration, the aquaculture industry had a positive factor income of €8.6 million, an increase of €1.8 million over 2009. Compensation of employees amounted to €3.6 million, 10.6 per cent lower than 2009, while entrepreneurial income amounted to €4.1 million against €1.4 million in the preceding year.

During the year under review, the volume of fresh fish sold increased by 1,262 tonnes (+22.5 per cent) over the preceding year. Complementing this increase in volume was a 42.7 per cent rise in the average price of fresh fish sold to €11.90 per kilogram (Table 11.18).

When compared to 2009, the intermediate consumption, which takes into account the expenses incurred in the production of farmed fish, declined by 33.3 per cent. Accounting for this were a drop in the value of purchases related to live fish and fingerlings and lower overhead costs of 46.2 and 41.8 per cent respectively (Table 11.19).
